# MATERIALS USED IN THE COLLECTION.

## ACTIVE DRY

### ACTIVE DRY

is an effective material that transfers moisture from the skin and maintains a pleasant and dry feel, even in extreme use. As the material does not bind moisture, it is quick to dry. Materials manufactured with the Active Dry technology are used in underwear and layering garments, technical shirts and pants and lining fabrics.

#### Active Dry materials in underwear and layering garments:

Products of the Active Dry Cool series are excellent as the bottom layer against bare skin in active sports.

The inner surface of Active Dry Warm materials has been brushed to add warmth to the material, and products made from the material are suitable against the skin and in intermediate layers.

## microtherm

### MICROTHERM

is thin, lightweight padding, which offers excellent thermal insulation with technical and waterproof materials. This microfiber padding is supple and warm. It maintains its properties well in demanding conditions and in the wash.

### THERMO BALL WADDING

A lightweight insulating material that is similar to down and offers a high heat insulation value. Thermo ball wadding products are soft and comfortable to use.

# THINK AHEAD!

## Halti's sustainable development programme

Respect for man and nature is the basis of all Halti's activities. No one can ignore climate change and environmental issues anymore. Our products are designed for an outdoor life and sport, and it's important for us to bear our responsibility for our environmental and economic footprint. As a company, we also take full responsibility for respecting people by manufacturing our products in socially and ethically acceptable conditions, in compliance with the laws and regulations of the countries where we operate, as well as the guidelines of the industry. We look into the future — we think in the long term and do our best to ensure that future generations will also be able to enjoy a clean environment. We think ahead!

### Environmental responsibility

- Halti designs and makes durable products and considers the environmental effects of each product's whole life cycle.
- We are a bluesign system partner and demand that both our new and existing subcontractors comply with the detailed bluesign restricted substance list.
- Our products are made in compliance with the REACH regulations, which protect people and the environment from industrial chemicals.
- We do not use real fur in our products.
- We follow the RDS standard, which means that our products are not made with feathers that are plucked from birds while they are still alive.
- We do not accept the unethical treatment of animals, including forced feeding, the plucking of birds that are still alive, or wool production where mulesing is used.

### Corporate social responsibility

- Our products are made in socially and ethically acceptable conditions.
- Since 2010, our procurement operations have been guided by our membership of the Business Social Compliance Initiative, which guarantees fair working conditions and safeguards the rights of our subcontractors' workers.
- As member of the FIBS Corporate Responsibility Network, we actively exert our influence to promote economically, socially and ecologically responsible operations and to maintain our awareness of these issues.
- As member of the EOG organisation we take part in sustainable development projects in our industry and obtain first-hand information about matters relevant to our sector.
- We support Protect Our Winters Finland, an organisation that campaigns against climate change and to save Finnish winters.

#### ECO PRODUCT FEATURES MINIMUM ONE OF THESE QUALITIES:

Product received the ECO label when;  
Fabric used is certified bluesign approved

It is produced of recycled material

The WR treatment is fluorocarbons free

It is made of organic cotton

It is made of high-quality down from  
strictly controlled suppliers, where the down  
is a by-product of food production

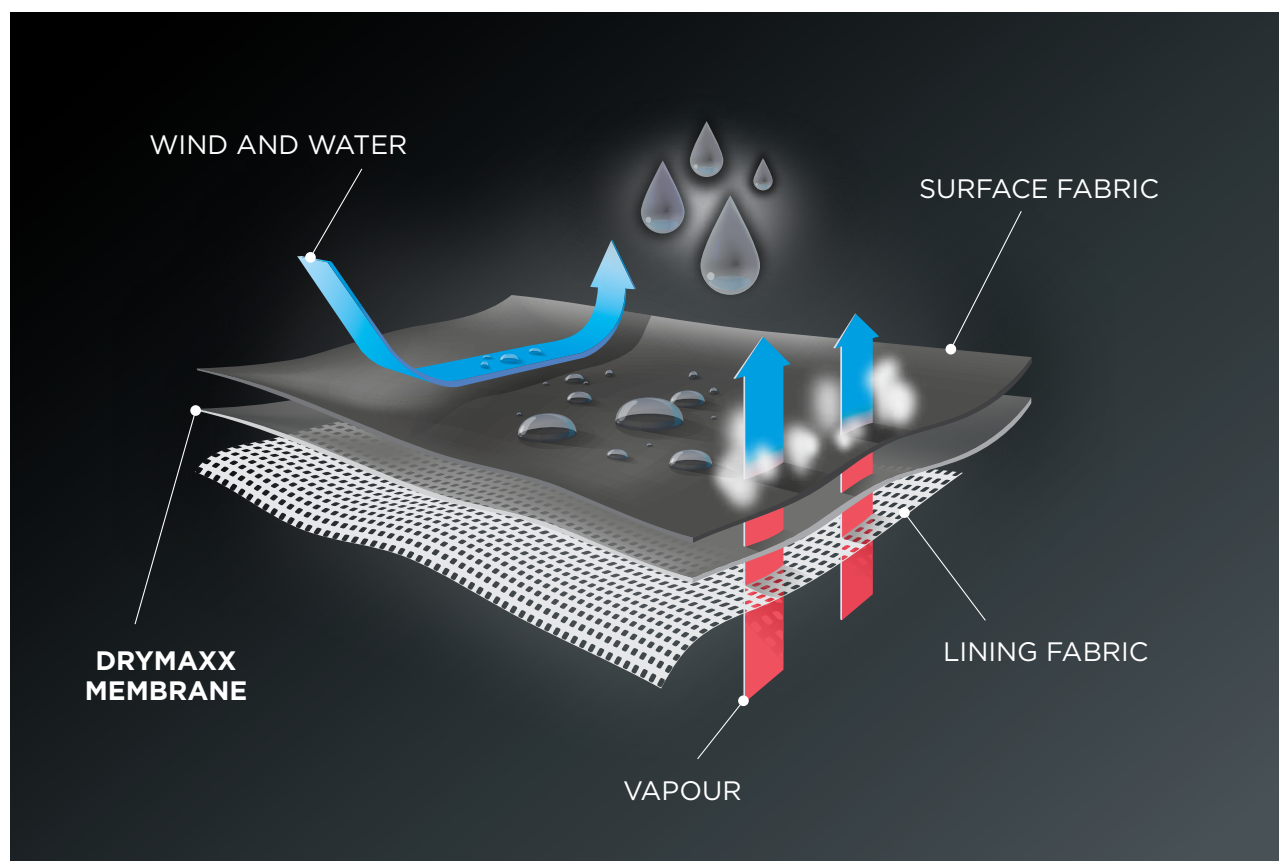

### Our future aim

Since 2010, sustainable development has been an important element of Halti's business strategy. A lot has been done already, but we are continuing to improve our activities. We will continue to aim high. The following are our concrete targets in all our market areas:

- We commit to increasing the proportion of our BSCI-audited suppliers to 80% by 2020 in all our product categories.
- We are significantly increasing the use of recycled materials in our products.
- We are improving our corporate responsibility in diverse ways as a member of FIBS and EOG.

# DRYMAXX®

WATERPROOF. WINDPROOF.  
BREATHABLE. TESTED.

Products with the DrymaxX® logo have been designed for extreme conditions. They provide protection and comfort even in rain, wind and snow. They offer high performance thanks to a combination of the DrymaxX® material and the product's structural properties.

#### DrymaxX® Classic

Waterproof comfort in normal conditions

- DrymaxX® Classic is an ideal option for light and comfortable exercise in normal conditions, both in dry weather and in rain.
- Water resistance at least 5,000 mm
- Breathability at least 5,000 g/m<sup>2</sup>/24 h

#### DrymaxX® All Weather

Focus on performance, not on conditions

- DrymaxX® All Weather is an excellent choice for all outdoor and winter sports
- All DrymaxX® All Weather fabrics offer excellent water resistance values, at least 10,000 mm
- Breathability at least 10,000 g/m<sup>2</sup>/24 h

#### DrymaxX® Ultimate

The only choice for extreme conditions

- DrymaxX® Ultimate products have been designed to keep the user active in extreme conditions
- Specifically suitable for sports that require high performance, regardless of the conditions
- Water resistance at least 15,000 mm
- Breathability at least 15,000 g/m<sup>2</sup>/24 h
